

Integration of key data is crucial these days to keep systems synchronized and provide insightful reports to business decision-makers. Clever First Aid incident data is valuable source data created at the point of use, created automatically by the Clever system as First Aid items are used

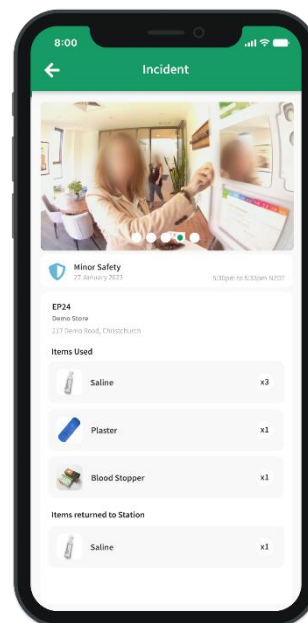

Incident data can be integrated from Clever First Aid to your Health and Safety Reporting system.

The Problem

- Time-intensive manual entry reporting
- Accuracy of incident reports if they are filled in late
- Inadequate overall visibility of incidents and discrepancy of what is reported in your H&S system
- Large volumes of low severity incidents that still might need recording according to your company policy

Business Opportunity

- Save time from report pre-population of key data
- Increase accuracy of reports with pre-population of key data
- Reduce the discrepancy between incidents in the workplace and those recorded
- Configure you H&S System to trigger reporting on Clever First Aid High and Medium Severity incidents
- Gain the most value out of both systems through integration.

What Next

Please let us know which H&S system you use. We are already integrated with Donesafe and Ecoportal, and more are on the way.

Clever Ecosystem

Manage your Spill Kit on the Clever Ecosystem alongside all your other First Aid Devices:
