

# AED Monitoring and Replacement Factsheet

**Your AED** is a critical piece of your first aid equipment. Fortunately, they are not used frequently, however, this means they can be forgotten about and may not work when you really need them to. Registering your AED on the Clever Ecosystem saves you time and increases your readiness for an event.

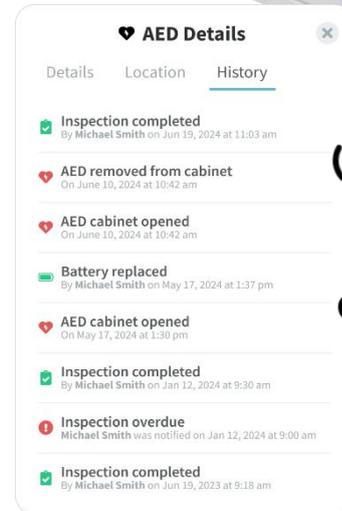

The Clever workflow can be augmented by Clever cabinets and now 4G enabled AED devices to further automate the process of readiness. We can assist with monitoring workflow for non-Stryker AEDs.

## The Problem

- The AED is not ready when you need it
- Forgetting to check the AED is working
- Forgetting to re-order battery and pads
- Not being aware the AED has been moved or taken out of the cabinet
- Not knowing where your AED's are across your operation and what condition they are in

## Business Opportunity

- Be ready for an incident
- Simple or automated workflow to check the AED frequently
- Know when the AED has moved or been used
- Have an online audit trail of the activity associated with your AED
- Gain the most value out of both systems through integration.
- Some differences here depending on AED type

## What Next

Please send us a list of your AED's (types, serial numbers and expiry dates, amounts and location). We can then provide a short proposal on what is possible.

## Clever Ecosystem

Manage your AED on the Clever Ecosystem alongside all your other First Aid Devices:
