

Eyewash Monitoring and Replenishment Factsheet

Eyewash solution dispensers come in various sizes, from small 30ml Saline ampules to 1-litre Bottles, as per the image, as well as in large refillable units or plumbed-in Eyewash Stations.

Clever can track the status, expiration, and replenishment of these various dispensers.

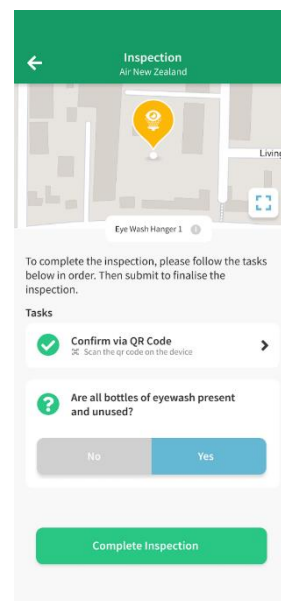

The Problem

- Time-intensive management of expiry dates
- Inadequate overall visibility of statuses and locations across the campus
- Manual processes for auditing
- Uncertainty about whether the Eyewash station has been used or if an incident has been reported in your Health & Safety (H&S) system

Business Opportunity

- Receive notifications when an Eyewash bottle is removed from its holder
- Automate notifications and escalation processes to create an online audit trail
- Enable online access to Eyewash statuses and results (via an app and portal) for all stakeholders
- Save time by automating equipment monitoring
- Integrate usage data with your H&S system for streamlined reporting

What Next

Please send us a list of your Eyewash devices, their locations and sample photos. We will follow up with a brief proposal and quotation tailored to your needs.

Clever Ecosystem
