Grab Bag Factsheet

CLEVER FIRST AID

Tracking and replenishing vehicle first aid kits can be challenging. Ensuring bags are compliant, stocked, and ready for use often requires significant time and effort, along with added costs.
Grab Bags are there for emergencies, but it's easy to lose track of their contents and expiry dates

Clever offers a solution for managing Grab Bags by tracking their status, monitoring expiration dates, and facilitating cost-effective replenishment. We support various sizes and types of kits to meet diverse needs.

The Problem

- Health & Safety (H&S) staff face difficulties manually auditing Grab Bags at individual sites and across multi site operations to ensure compliance.
- Manual processes for auditing are time-consuming and inefficient.
- Limited visibility into the compliance status across the sites and Grab Bags.
- Uncertainty about kit usage or incident reporting in the Health & Safety system.

Business Opportunity

By integrating your Grab Bags into the Clever Ecosystem, you gain full visibility and streamlined management:

- Automated Checks: Let the Bag do the checking and reporting in automatically and build an online audit trail for compliance and usage.
- Instant Kit Status: Quickly see if a kit has been opened and be notified if it has been taken off the hook
- App-Based Usage Tracking: Record used items via the app to prompt automatic replenishment.
- Integrated Data: Sync usage data with your Health & Safety system for seamless reporting.
- Flexible Management Options: Our solution supports a variety of Grab Bag sizes and contents.

What Next

Please send us a list of your Grab Bags their size and contents, and sample photos. We will then follow up with a brief proposal and quotation tailored to your needs.

Clever Ecosystem

Manage your Grab Bags on the Clever Ecosystem alongside all your other First Aid Devices:
