

Vehicle First Aid Kit Factsheet

Tracking and replenishing vehicle first aid kits can be challenging. Ensuring kits are compliant, stocked, and ready for use often requires significant time and effort, along with added costs. For many, a vehicle serves as a workplace, making first aid kits a regulatory necessity.

Clever offers a solution for managing vehicle first aid kits by tracking their status, monitoring expiration dates, and facilitating cost-effective replenishment. We support various sizes and types of kits to meet diverse needs.

The Problem

- Health & Safety (H&S) staff face difficulties manually auditing an entire fleet of vehicle kits to ensure compliance.
- Manual processes for auditing are time-consuming and inefficient.
- Limited visibility into the compliance status across the fleet.
- Uncertainty about kit usage or incident reporting in the Health & Safety system.

Business Opportunity

By integrating your vehicle kits into the Clever Ecosystem, you gain full visibility and streamlined management:

- Automated Scheduled Checks: Set up routine inspections to maintain an audit trail for compliance and usage.
- Instant Kit Status: Quickly see if a kit has been opened.
- App-Based Usage Tracking: Record used items via the app to prompt automatic replenishment.
- Integrated Data: Sync usage data with your Health & Safety system for seamless reporting.
- Flexible Management Options: Our solution supports vehicles returning to a base or directly to home.

What Next

Please send us a list of your Vehicle kits, their size and contents, and sample photos. We will then follow up with a brief proposal and quotation tailored to your needs.
